

## Conducting a manual penetration testing on a Simulated web application Environment

The below are some of the Flags found during the manual penetration testing on a simulated web Application Environment. Each Flag reveals sensitive information which can cause PII leakage from several functions used by the web applications such as FTP service, Robots.txt, Config File, Admin page, Sensitive information on Open source pages on the front end code of the application.

Flag 1: FTP Service

Flag 2: Robots.txt page is not blocked, found during the gobuster directory search for files.

Flag 5: Configuration file

flag 5 -> 88615e277ae89ad96a4a365a9a854740

| PHP Version 7.4.30                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
